

Mac: Accessing the Flow Server (T://128.104.208.85)

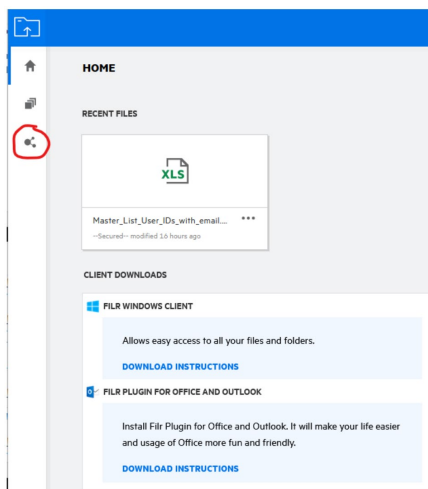

1. Connect to a campus network, by being on campus or connecting via a VPN
2. Do **not** use Safari, as it will download only one data file at a time. Firefox or Chrome will work to download entire folders/experiments.
3. Mac iOS does not natively support unzipping ZIP64 folders. Download iZip Archiver from the App Store (it's free). The Flow Lab also has a copy of this app that we can email you. Install this app (you may need your department's IT staff to do this for you).

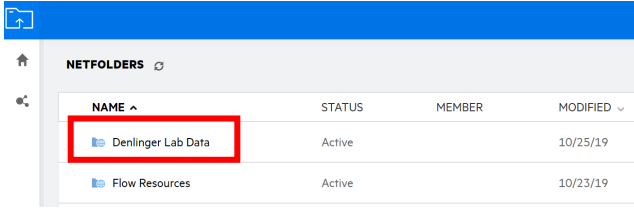

4. Go to <https://filr.medicine.wisc.edu>
5. Enter your Department of Medicine User ID and Password (sent via email by DOM IT).

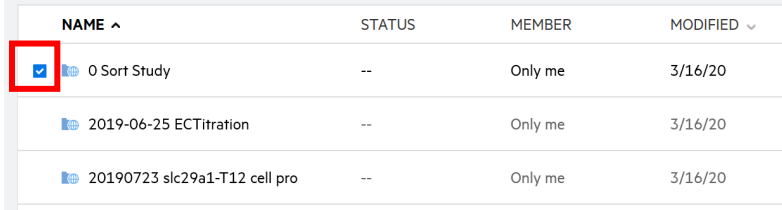

6. Click on Net Folders in the left icon bar.

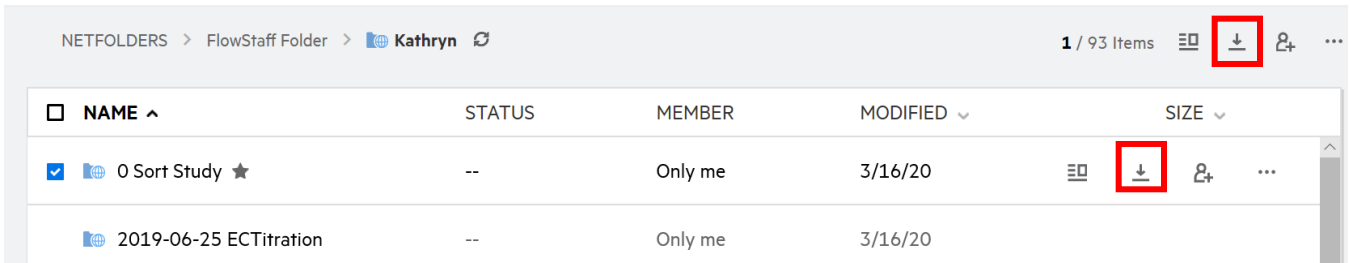

7. You will now see lab folders for any lab you are associated with. You will also see the Flow Resources Folder. Open the folder you are interested in by clicking on it.

8. Check the box to the left of the folder(s) or file(s) you want to download.

9. Click on the Download button.

10. The files will download to your web browser's specified download location. Unzip the folder by right clicking and choosing Open With -> iZip. You can then transfer them to your department's secure server.
